Summary

AI engineer building production agentic AI, inference infrastructure and applied ML across cloud GPU, edge and constrained environments. Deeply experienced in taking LLM and multimodal systems from runtime design and evaluation through secure deployment, CI/CD and operational recovery.

Experience

Founding Engineer Feb 2025 – Present
CVision *Wyoming, USA (Remote)*

- **Commercial delivery**: Built production AI systems for industrial and SME partners, generating **$150K+ USD in first-year revenue** and supporting **$2M+** in partner deal value; worked with YC- and Antler-backed partners.
- **Technical leadership**: Grew and led a **7-engineer** team across architecture, delivery and technical execution for client-facing AI products.
- **Production AI**: Designed and deployed agentic LLM, RAG, GNN, knowledge-graph, multimodal and computer-vision pipelines across cloud, edge and constrained environments with tight compute, memory and latency budgets.
- **AI platform**: Built self-hosted runtimes, model packaging, CI/CD and deployment/recovery workflows for live customer systems; partnered with hardware teams on edge and neuromorphic tooling.
- **Neuromorphic tooling**: Delivered Python libraries for neuromorphic workflows, including compression reducing a 10-layer network from **200 KB to 200 B**.

AI Systems Engineer (Contract) Feb 2026 – Oct 2026
Noah Labs *San Francisco, USA (Remote)*

- **Sentinel**: Owned core agent-runtime components for Noah Labs' air-gapped AI IDE: planning, parallel agents, tool orchestration, memory, code retrieval and workspace isolation for regulated legacy-code environments.
- **ARK**: Built agent-runtime and inference infrastructure for ARK, a safety layer for autonomous systems; supported simulation workflows that detect GNSS disruption, apply configured safety policies and retain operator authorization over actions.
- **GPU inference platform**: Built GPU-cluster scheduling and inference orchestration on NVIDIA infrastructure with vLLM, serving Gemma 4 31B, NVIDIA Nemotron 3 Ultra and Thinking Machines Inkling across agent workloads.
- **Evaluation and routing**: Developed task-aware model evaluation and routing to select models by capability, latency and task requirements, preventing regressions before release.
- **Secure execution**: Integrated DLP controls and execution guardrails so untrusted documents, tickets and commits could not autonomously initiate agent actions.
- **Release engineering**: Hardened cross-platform CI/CD, Docker packaging and integration testing for reliable developer and production releases.

Deep Learning Research Intern Jun 2024 – Sep 2024
Optical Networks and Technologies Lab, NUST *Islamabad, Pakistan*

- Implemented and trained transformer and GAN models for optical-signal classification and anomaly detection; explored attention mechanisms and evaluated performance on optical-network data.

Open-Source Projects

TALON – *Neuromorphic SDK (Python, PyTorch, snnTorch, HLS4ML)* Docs

- **SDK**: Built 7 packages (IR, visualizer, torch bridge, i/o, backend, graph, simulator), moving spiking neural networks from PyTorch toward FPGA hardware; visualizer renders **23–30M events/s**.

Frames2Py – *Event-camera streaming library (Python, NumPy, HDF5)* GitHub | PyPI

- **Library**: Built an Apache-2.0 library that turns live event-camera streams into frames for concurrent consumers; supports Prophesee EVT 2.0/3.0, AEDAT 4.0 and HDF5, sustaining **20M+ events/s** in NumPy benchmarks.

Skills

Languages: Python, TypeScript, JavaScript, C++, SQL, Bash
AI / ML: Agentic AI, multi-agent systems, LLM inference and serving, vLLM, RAG, LLM evaluation, model routing, PyTorch, transformers, GNNs, knowledge graphs, SNNs, computer vision, event-based vision
Infrastructure: NVIDIA GPU clusters, Docker, Kubernetes, AWS, GCP, Azure, Lambda Labs, GitHub Actions, CI/CD, Linux
Backend / Data: FastAPI, Flask, Node.js, REST, SSE, SQLite, MongoDB, MySQL, HDF5

Education

B.Eng. in Software Engineering Nov 2021 – Jun 2025
National University of Sciences and Technology (NUST) *Islamabad, Pakistan*
